Case E2E sales analytics

Knowing real-time sales numbers is essential in a retail chain. Having the numbers in an appealing app is even better. We build a solution based on open source tech. Sales per store are known anytime, anywhere.

Understanding of back-end and integrations and cloud was essential. And ability to execute.

A cool mobile app is not enough only on its own. It is the end of a chain of innovation.
We master it all.

Shorten time-to-market and scale rapidly with Tarento
